- if we have to put percentages on it --
- 2 | Q. (Mr. Caputo) Well, we don't have to.
 - A. I don't know that I can put percentages on it. I know that given the information that we have now, the starter is a -- to me, a significant possibility that I cannot exclude.
 - Q. Right, but I'm not asking you to exclude it. I'm asking you based on the evidence you have now, is the failed hose a more likely cause of the fire than anything associated with the starter?

MR. HORTON: Object to the form again.

THE WITNESS: If a failed hose, yes.

- Q. (Mr. Caputo) What about this failed hose that you saw?
- A. Well, we also know that we have preexisting leaks, and I don't think you can categorically exclude that the hydraulic fluid out of this hose is the first thing to ignite more so than the potential leak of another hose.
- Q. Well, let's -- That's fine and we can talk about other alleged leaks, but the failed hose that you saw, based on the evidence today, is that hose a more likely cause of the fire than anything associated with the starter?
